

EGGER Launch their 2020-2022 range

The new 20-22 range has arrived. We're excited to tell you what we think!

The new collection brings together design trends from across the globe, to give the best finishes for all interiors. Through success of the perfect sense range, Egger have refreshed the collection and added material decors meaning a high value look can be created. The 'texture meets colour' range has been expanded, with 14 plain colours available in an ST27 double paper pressed painted effect woodgrain, as well as ST19 single paper pressed linear woodgrain effect.

These new textures and décor combinations allow you to create designs using the same décor with different textures throughout, giving a simple and harmonious appearance, while still creating a contrast.

We believe the new 2020 range featuring stones, metals and woods, will give a more authentic and realistic material look.

The accent edging range also shows recognition to the trend in contrasting edging effects, making combinations with the boards to create something unique possible.

EGGER have also worked hard at creating digital services, which will help bring the new collection to life, using the new app will make it easier to select visualise and present EGGER.
