

TECOLINE

Proven quality on all edges.

BauschLinnemann

A SURTECO COMPANY

TECOLINE edgebandings in reliable quality.

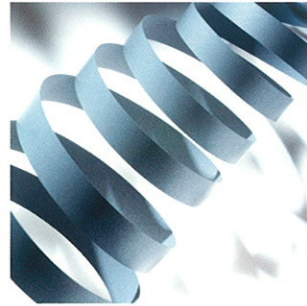

TECOLINE is an endless single-layer edgebanding with a surface finish, supplied in rolls. Made from non-fading, specially-formulated papers, they can be perfectly matched, where required, to the TECOFOIL surface foils in solid colours or printed with woodgrain or fancy designs and impregnated with duroplastic resins.

Selected, environmental-friendly lacquering systems are available for the surface, as well as a variety of mechanical or chemical embossing options. The designs also include solutions to match genuine wood veneers and other surface systems.

TECOLINE

TECOLINE P

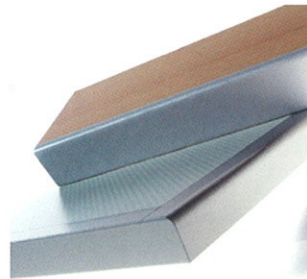

is an endless single-layer edgebanding with a surface finish for coating straight surfaces.

Straight edgebanding

TECOLINE S

is a softforming edgebanding with a surface finish for coating softforming profiles, including those with narrow radii, supplied in rolls.

Softforming edgebanding

TECOLINE F

is an edgebanding which can be bent at right angles for edging door rebates.
